There Is No Largest Prime Number

The proof uses *reductio ad absurdum*.

Theorem

There is no largest prime number.

- 1 Suppose p were the largest prime number.
- 2 But $q + 1$ is greater than 1, thus divisible by some prime number not in the first p numbers.

There Is No Largest Prime Number

The proof uses *reductio ad absurdum*.

Theorem

There is no largest prime number.

- ① Suppose p were the largest prime number.
- ② Let q be the product of the first p numbers.
- ④ But $q + 1$ is greater than 1, thus divisible by some prime number not in the first p numbers.

There Is No Largest Prime Number

The proof uses *reductio ad absurdum*.

Theorem

There is no largest prime number.

- ❶ Suppose p were the largest prime number.
- ❷ Let q be the product of the first p numbers.
- ❸ Then $q + 1$ is not divisible by any of them.
- ❹ But $q + 1$ is greater than 1, thus divisible by some prime number not in the first p numbers.
